

Tunable Active Notch Filter

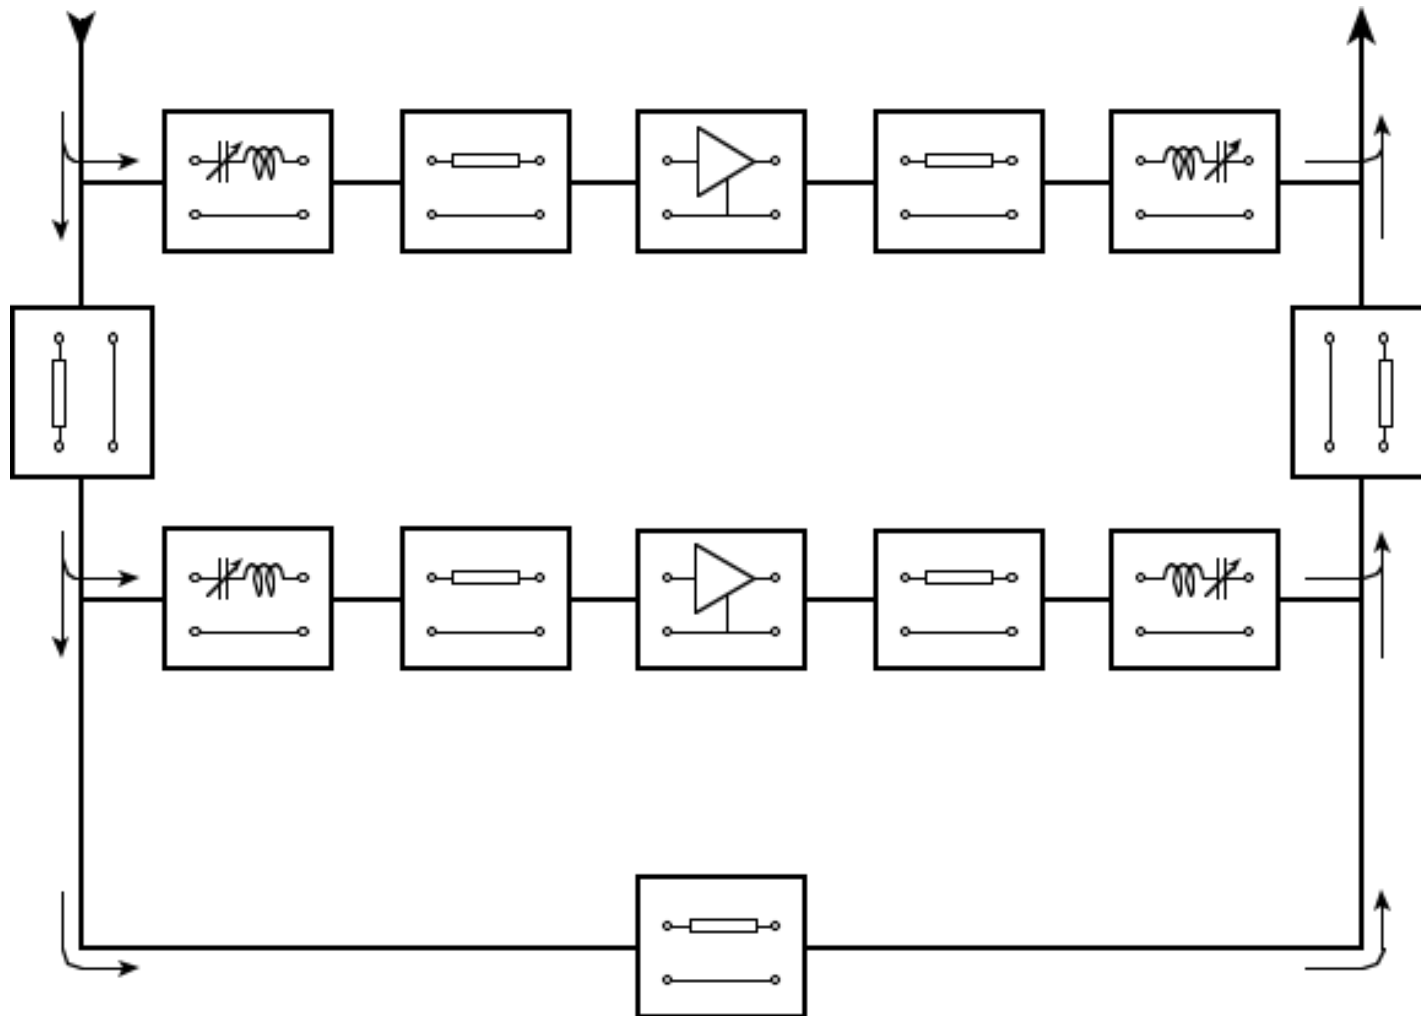

IEEE Trans. Microwave Theory and Tech., vol. 49, no. 8, pp. 1431-1437, Aug. 2001.

- **Three-branch architecture with straight-through bypass channel**
- **No active circuit elements in signal path at passband frequencies**
- **No passband distortion**
- **Low passband noise figure of <1.8 dB**
- **Notch depth of 40 dB**
- **Constant notch width of 70 MHz at 10-dB-down points**
- **Notch center frequency tunable over 1-GHz range**
- **Use of commercial varactors and amplifier chips**

Hybrid-circuit realization of a tunable notch filter

Conceptual block diagram of the tunable notch filter

Measured filter performance for five different varactor settings
